SUMMARY

Analytics leader who builds the GTM data layer as well as the reporting on top of it. 12 years of experience in SaaS, fintech and HR-tech. At Miro since 2022, I own go-to-market analytics for a self-serve motion and an enterprise sales-led motion side by side: the measurement strategy leadership plans against, attribution and program economics worked out with Finance, the executive readouts and weekly reviews that run on them, and the production data layer underneath. Built and led a BI team of four; analytics owner for 40+ stakeholders.

Stack: SQL, Python, Snowflake, dbt, Looker and LookML, Airbyte, Terraform, Fivetran, Airflow, Snowflake Cortex semantic views. GTM tools: Salesforce, Common Room, Gong, Gainsight, Braze, Outreach, Marketo, Google Analytics. Daily use of Cursor and Claude.

EXPERIENCE

MIRO

GTM Senior Analytics Manager, 2024-Present

- Built and own the sales-activity mart family behind AE account intelligence: production dbt with defined grain, tests and PR review, reducing 722K activity rows to 33K thread-evidence rows before LLM consumption (95% reduction).
- Authored the annual marketing pipeline analysis: deduped, opportunity-grain multi-touch attribution with a look-back window and documented assumptions across two campaign families (ICP fit of credited pipeline +98% vs baseline). Caught a multi-campaign fan-out before publication and wrote the grain-and-dedupe standard.
- Rebuilt partner-credit program measurement on production dbt marts, correcting reported program ARR by 2.9x and delivering the first clear view of credits granted vs consumed; consolidated mis-split partner ARR and surfaced that the largest partner channel carried about 31% of volume at below-average conversion.
- Quantified a ~4,000-org self-serve cohort over 24 months (91% activation, 73% sustained usage, 44% team adoption; team-adopted orgs approx. 2x ARPU) and established an economic CAC 6.7x the flat-conversion view at a stated credit cost rate, showing flat-conversion LTV overstated approx. 1.5-2x.
- Led the digital-native scaled-outbound build (ICP enrichment, scored account model, Airbyte and Terraform ingestion, CRM-join QC for a 100+ account pilot) and designed day-one measurement for an AI SDR pilot with the comparison bar locked and cohorts fenced before results existed.
- Architected the dbt reporting foundation for an enterprise adoption program (6% lift in accounts above usage targets) and own the monthly engaged-ARR layer (+12% year over year).

Marketing Analytics Manager, 2022-2024

- Built the campaign scorecard and ARR impact models adopted by 40+ marketing, field and RevOps users as the single source of truth for pipeline and ARR, with adoption telemetry on published analyses.
- Operationalized the Campaign ROAS model with Strategic Finance and Marketing Ops; exceeded Canvas '24 registration targets by 50% with attendance forecasts within 2%; drove 463% QoQ review growth to a Gartner Customers' Choice distinction.

BEYOND FINANCE | *Manager, Business Intelligence, 2021-2022*

- Led a BI team of four for Marketing and Sales analytics; modernized the data model, integrated 10+ sources into Snowflake and Looker, reduced licensing spend through Looker governance, launched a company-wide Looker curriculum.

HIREOLOGY | *Product Analytics Manager / Technical Program Manager, 2018-2021*

- Re-architected the Looker instance for scale, cutting internal BI support cases 50% and business-review process time 75%; launched core data repositories and standardized Looker processes.

EARLIER

- Walgreens Boots Alliance, Business Analyst (2017-18): KPI optimization on a multi-billion-dollar inventory; Rite Aid acquisition data governance. Avant, Analyst, QA & CX (2014-17): automated Looker reporting; CX programs lifting NPS 25% at 95% CSAT.

EDUCATION

University of Illinois at Chicago, BSBA, Finance & Economics
